Partridge India, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.The main objective of bringing out a book of this sort is to popularize the story of transcontinental migrant shorebirds visiting the West Coast region of India. The book focuses mainly on two major issues (on the basis of thorough scientific study): 1. The shorebirds are ecological indicators of wetland health on a global scale. It is a matter of serious international conservation concern that shorebird populations are declining all over the world, with many species and populations facing imminent threats of endangerment or extinction. The population of migrant shorebirds coming to our West Coast has been declining drastically. This finding is an outcome of dedicated and systematic scientific investigation (as a part of the doctoral work of Dr. Aarif) made in the West Coast, focusing on Kadalundi-Vallikkunnu Community reserve (KVCR). KVCR, one of the four community reserves in India, supports transcontinental migratory shorebirds in Central Asian Flyway (CAF). The CAF covers thirty countries, of which India is one of the dominant wintering grounds for shorebirds. 2. Shorebirds can be regarded as global sentinels of environmental changes due to their migratory ecology and habitat use patterns. For long-distant migrants, the ecological quality of wintering ground appears to be of key importance. The West Coast of India faces environmental threats due to anthropogenic activities. Habitat destruction, solid waste dumping, sand mining, and so on are subjected to scientific study in KVCR. The role of man-made infrastructures in/near the habitat like roads, bridges, mobile towers, etc., were also subjected to study. The consequences of these anthropogenic activities on the survival of macrobenthic invertebrates (major prey items of shorebirds) and their habitats have been studied following proven scientific methods. The...
